Preamble

The overall aim of the **TACTIC** project is to increase preparedness to large-scale and cross-border disasters amongst communities and societies in Europe. Therefore TACTIC based its work on the state-of-the-art literature related to risk perception and preparedness, developed a self-assessment both for organisations responsible for managing such different risks as flooding, earthquakes, terrorism and epidemics as well as the general public exposed to these hazards. It also created a catalogue of good practices in education and communication. Rather than taking a top-down approach to preparedness, TACTIC pursues a collaborative project strategy by including different user and stakeholder groups in the development, testing and validation of tools and materials throughout the project by conducting four case studies focusing on terrorism, floods, pandemics and earthquakes. This ensures that the outcomes of the project reflects the needs of end users and ensures that the project's outcomes have a life span after the project has officially ended.

All these findings and outputs are presented in an online learning platform which aims to ensure the sustainability of the use of the projects outcomes after the project has come to an end.

This document provides the final versions of the self-assessment for the general public with the aim of assessing their preparedness. This version is also included in the online platform TOSAP.

The online platform can be accessed by following this link: <https://www.tacticproject.eu/tosap/>

	Terrorism	Floods	Epidemics	Earthquakes
	<p>Welcome to the Preparedness-Check for the general public on “Terrorism”!</p> <p>You want to learn more about how to prepare for a disaster? Or you would like to know how well prepared you already are? Then we welcome you on the TACTIC online platform and ask you to take some time - about 10 to 15 minutes - to answer the next set of questions.</p> <p>You will now be asked a number of questions e.g. about your previous hazard experience, how you receive hazard-related information and if that leads you to taking preparedness actions.</p> <p>Based on your answers, a short feedback report will provide an overview about factors that shape preparedness, as well as specific actions to be taken to increase preparedness. It will also provide you with links to documents and websites that might be useful, if you want to learn more.</p>	<p>Welcome to the Preparedness-Check for the general public on “Floods”!</p> <p>You want to learn more about how to prepare for a disaster?
